

OPTREL CRYSTAL 2.0 PAPR WELDING HELMET

SKU: OPCRPH

£485.00 ex VAT

Stock: Available to Order (3-5 Days) Ordered in and delivered within 3-5 days.

The new Optrel Crystal sets a new record with an incredibly low Shade 2 light state. Welders have for the first time a practically unclouded and clear view of their working environment. This in combination with the almost perfect colour spectrum allows welders to see what is really going on in the weld pool, and with a clarity that equates to insights into a new dimension. This is why welders describe this as enlightenment.

This new development reduces the need for a clear flip-up visor as you can see more through the auto-darkening lens than ever before. The crystal also benefits from Optrel's autopilot feature, which automatically adjusts the dark shade depending on what you are welding, eliminating the need to manually change shade settings yourself. This feature is adjustable to suit your eyes or can be switched off completely for manual adjustment.

Features

- Crystal Lens Technology 2.0 - See clearly what happens before during and after the welding process.
- Autopilot Shade Level 4 to 12 - Your welding helmet automatically adapts to changing light conditions.
- Twilight Function - You can always remain relaxed even in case of fast lighting changes.
- Sensitivity Control - Adapts the helmet to your environment and requirements.
- Grind Mode - The brightest vision during grinding work ever to be offered by a welding helmet.
- Heat-Reflecting Paint - Helping you keep a cool head at all times.
