

OPTREL E3000X POWERED AIR UNIT

SKU: OPEPAU

£799.00 ex VAT

Stock: In Stock Order before 3pm for Next Day Delivery. 1

The Optrel E3000X powered air purifying respirator uses a high-powered motor to draw air through a high-efficiency filter. Clean air is supplied to the operator through a breathing tube and compatible headtop within the Optrel range. This positive pressure air delivery inside the selected headgear prevents any outside contaminants from entering, thus the wearer is protected. A major advantage of positive pressure air delivery is that it negates any face fit testing as the mask is not sealed to the face, breathing is also easier as the motor is pulling air through the filter and not the lungs. A continual flow of cooling air – up to 240 litres per minute, improves wearer comfort and increases productivity, especially during manual labour.

- Up to 18 hours of battery life.
- Brushless motor.
- Very high air flow and long run time rates:
 - Level 1: min. 170 l/min, 18 hours
 - Level 2: min. 210 l/min, 16 hours
 - Level 3: min. 240 l/min, 13 hours
- Spark trap and Pre-filter systems dramatically reduce running costs by sparing the main filter from heavy contamination.
- Audible alarm alert: blocked filter and no filter inserted.
- Built-in flow sensor negates a manual air flow check as with other PAPR systems.
- Weight: 1560 grams including filter, belt and battery.

Included as Standard: Blower unit with a hose, TH3P R SL Filter, 18h LI-ion Battery, Leather belt, Universal Charger, Parking buddy, Bag.
